Force_stop

Driver_pressure_Ch
<B>physical channels</B> specifies the names of the physical channels to use to create virtual channels. The DAQmx physical channel constant lists all physical channels on devices and modules installed in the system.

Vac_pressure_Ch
<B>physical channels</B> specifies the names of the physical channels to use to create virtual channels. The DAQmx physical channel constant lists all physical channels on devices and modules installed in the system.

Global_driver_rate
<B>rate</B> specifies the sampling rate in samples per channel per second. If you use an external source for the Sample Clock, set this input to the maximum expected rate of that clock.

AI_input_config
<B>input terminal configuration</B> specifies the input terminal configuration for the channel.

Inlet_SSR_Ch
<B>physical channels</B> specifies the names of the physical channels to use to create virtual channels. The DAQmx physical channel constant lists all physical channels on devices and modules installed in the system.

Exhaust_SSR_Ch
<B>physical channels</B> specifies the names of the physical channels to use to create virtual channels. The DAQmx physical channel constant lists all physical channels on devices and modules installed in the system.

P_vac_target

P_driver_target

Vacuum_units

Driver_units

Abort

Fire_AO_Ch

Frequency (Hz)
<B>rate</B> specifies the sampling rate in samples per channel per second. If you use an external source for the Sample Clock, set this input to the maximum expected rate of that clock.

AI_Capture_ms

AI_Start_delay_ms
